

The following release for Driveri is available to all Driveri customers now.

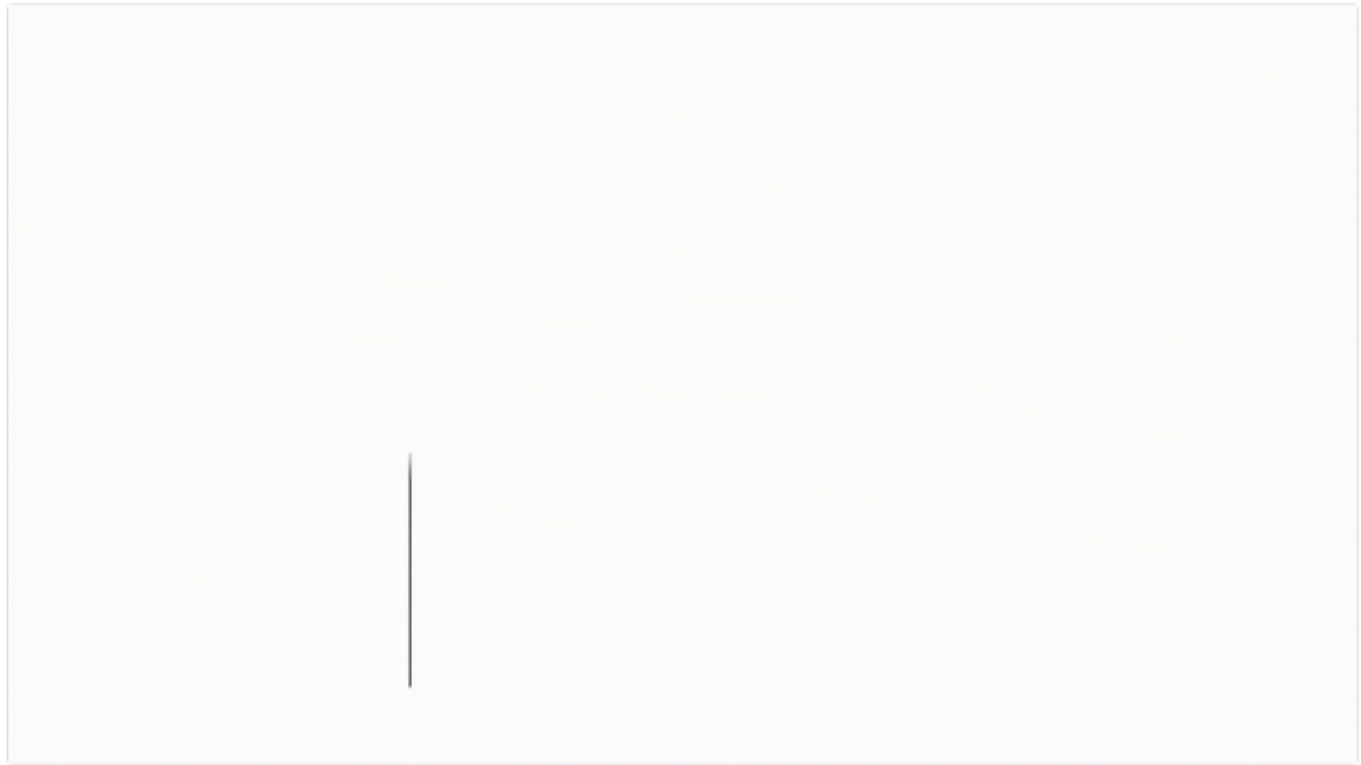

## Feature Update – Updated Device Health Status

### New Device Health Status Columns Available

The Device Summary provides in-depth insight into the health statuses of Driveri cameras to specify if the vehicle is assumed in service or not in service with Device Status and Vehicle Status columns.

**Note.** Additionally, the column titled “Last Received Driver Data” provides further drill-down data to specify the date and time when driver assignment data was last received from the device.

The Device Status and Vehicle Status columns provide at-a-glance status data as to the device and vehicle status within the fleet.
